In 2011, ELY provided collection relocation services for the United States Army collections at the Communications, Radar, and Electronics Museum. This project involved the packing and crating of 13,500 pieces for transport to the Aberdeen Proving Ground. Using a space-saving, modular packing design, ELY consolidated the entire collection into less than two truckloads, while maintaining our high standards of quality. ELY's team packed each piece according to type and size, using appropriate archival materials and recorded its individual information for future use.
