In 2014, ELY partnered with Kubik to mount and install the artifacts displayed in the Canadian Museum For Human Rights in Winnipeg. Our mountmakers worked with museum staff, designers, and fabricators to craft mounts and install 235 artifacts over eight weeks. We managed the shipment of tools and materials across international borders to assemble an onsite metal shop for mount fabrication. Our experience with major installations enabled us to effectively communicate with museum and fabrication teams to safely install the artifacts as the galleries were completed. Our team's dedicated efforts contributed to the creation of the first new national museum in Canada in over 40 years.
